GNFAC Season Summary 2023

Submitted by Doug Chabot on Mon, 05/08/2023 - 20:14

We just ended our 33rd year of operation with a winter of cold temperatures, above average snowfall and snow depth measuring 100% to 152% of normal on April 1. After a few anemic seasons this was a reminder that the snowfall pendulum swings both directions.
