

Telemark Meadows area E. aspect ~8,000ft.

Date

Wed, 12/30/2020 - 13:00

Activity

Snowboarding

Widespread ice crust on all aspects buried underneath fresh snow. Facets directly underneath the crust, small layer(few inches) of more consolidated snow, then more weak/sugary snow all the way to the ground.

Widespread collapsing and cracking observed while stomping around the slope doing beacon practice

Observer Name

Jeffrey Mann
