

Mt Ellis

Date

Fri, 02/12/2021 - 16:15

Activity

Skiing

I took a tour up Ellis today, and things haven't changed since you guys were up there. A pit at 7400' on the ascent had HS 105 and ECTP15 on depth hoar 20-30 cm off the ground. The surface conditions were excellent; subsurface not so much. I don't imagine that will change very quickly. There was a light east wind on the ridgeline, but it wasn't transporting much of anything.

Region

Northern Gallatin

Location (from list)

Mt Ellis

Observer Name

Sam Reinsel
