## West side bridgers

Date Fri, 12/30/2022 - 01:30 Activity Skiing

Went to jones creek yesterday, 20 cm facets underneath everything it seems. Depth where the wind could reach it(sw aspects mostly) was averaging 60 cm, 100 to 120 cm where it was more protected. Not a lot of weight yet but columns failed on isolation. No cracking or whumphing

Region Bridger Range Location (from list) Truman Gulch Observer Name Pat Hinz
