

Snowpack near Mount Zimmer Yurt

Date

Mon, 12/02/2024 - 12:00

Activity

Skiing

From email: "Ernest and I dug a pit while setting up the yurt today, just off of the roundabout below the yurt. At 9410ft, NNW [aspect](#), 10 degree slope, we found HS 75cm. The general structure seems right side up. There are facets at the bottom 20cm or so, but they are wet, and seem to be rounding. An ECT gave us ECTN20 at 40cm down. Here's a quick hand hardness profile. The bottom 20cm is slightly less hard than what's above it." Photo: N. Mattes

Region

Cooke City

Location (from list)

Mt. Zimmer

Observer Name
